What Is It?
Edtech2 is the name of the Edtech2 server. Edtech students are provided free server space on the edtech2 server (http://edtech2.boisestate.edu) throughout their course of study.
[Note: Student accounts on the Edtech2 server are deleted (and all files) one year after graduation.]

How do I get it?
All students registered for EDTECH502 are automatically setup with an edtech2 account during the first week of the semester that they take EDTECH502.

How do I use it?
Students will learn how to “connect” and “upload” files to the edtech2 server using Adobe Dreamweaver in EDTECH 502.

How do I connect to It?
This is the basic information you need to connect to your edtech2 web space.
Connect Using: FTP over SSL/TLS (explicit encryption)
FTP Address: edtech2.boisestate.edu
Username: broncoweb user name
Password: broncoweb password*
*[Note: Your BroncoWeb password needs to be changed every 90 days in BroncoWeb; once you change your password, it needs to be changed in Dreamweaver as well]

The following page walks you through how to set up a site and test your connection. But you can also watch the following video: http://www.youtube.com/watch?v=3ddXzNK6WPg

How do I get help?
Contact Nelson Baquero (nelsonbaquero@boisestate.edu)

Note: If all of a sudden you can no longer connect to the edtech2 server but have been able to in the past, then it is likely due to one of the following problems:
• Password Problem: You have to change your BroncoWeb password every 90 days. Each time you change it, you must also change it Dreamweaver. If you can’t connect all of a sudden, try changing your BroncoWeb password and then changing your password in Dreamweaver.
  [To change your password in Dreamweaver, go to Site >> Manage Sites >> click on the site and click edit >> click servers >> click on the server you want to edit >> click the pencil >> change password >> save]
• Firewall Problem: Certain public places (e.g., libraries or café’s) as well as places of employment block FTP access. If you are having problems connecting to the edtech2 server, we recommend connecting in a location in which you were able to connect to in the past.
• FTP over SSL/TLS (explicit encryption): Beginning January 2013, you must connect using FTP (over SSL/TLS).
Setting Up a New Site and Testing the Connection in Dreamweaver CS5.5 or newer

1. Open Dreamweaver & click on Site and then New Site… (Note: To edit a current site, click Manage Sites… which is below New Site…)

2. Give the site definition a “Site Name” and then identify a “Local Site folder” on your computer where you plan to store your files by clicking on the folder icon. (Note: I have named this site “Edtech2” and created a folder in my Documents called “edtech2”)

3. Click on “Servers” on the left and then click on the + sign.

4. Fill in the “Server Name,” select FTP over SSL/TLS, type in the FTP address (don’t include http:// or ftp://), Broncoweb username & BroncoWeb password. Click test. Dreamweaver will let you know if you successfully connected.
